Project Final Report (10 Points)

Provide a document containing the following sections:

1. Provide a README for running the project. Specify all libraries, software, etc. needed to run the application. Specify expected installation directories.
2. Provide the UML provided in the progress report as well as the EER model for the submitted database schema (Reverse Engineer your final schema in the MySQL workbench). If you are submitting a Mongo database, please provide some description of the schema.
3. Provide the final user flow of the system. List the commands or method the users performs to interact with the system.
4. Provide a lessons learned section
    1. Any code not working should be documented in this section
5. Future work
    1. Planned uses of the database
    2. Potential areas for added functionality
